                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes a human growth hormone inhibited tumour suppressor (hGHITS) protein. The hGHITS proteins can be used in an antineoplastic pharmaceutical preparation. Probes for the hGHITS DNA sequences can be used in diagnostic pharmaceutical preparations. The diagnostic pharmaceutical preparations can be used for examining expression of hGHITS genes in dwarfism, giantism, acromegaly, angiopathy, diabetic nephropathy or cardiopathy; or in malignant tumours including breast cancer, renal adenocarcinoma, colorectal cancer, and leukaemia. Antibodies against the proteins can be used in a tumour suppressor gene.

The present sequence encodes a partial polypeptide which has kinase activity. The kinase polynucleotides can be used to express the polypeptides, and as probes to identify nucleic acids encoding proteins having kinase activity. The kinase polypeptides and fragmented polypeptides are used as molecular weight and isoelectric focusing markers, and as controls for peptide fragmentation. They also have a number of therapeutic uses as kinases play a central role in cellular signal transduction. The polypeptides could also be used to identify binding partner proteins. The polypeptides can also be used a reagent to identify any proteins that the polypeptide regulates, and proteins with which it might interact. The polypeptides may also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               preparation of antibodies. The antibodies can be used in detect the presence of the protein, and to purify the protein

KESULY I IRC-09-836-302-2
Sequence 2. Application US/09836392
; Patent No. US20020173458A1
GENERAL INFORMATION:
** AFTILEAN: NUCCH EL 21. ** AFTILE OF INVENTION: Protein Turcaine Kinase Recentor Dolumicleotides. Polumentides
; TITLE OF INVENTION: Antibodies
; FILE REFERENCE: PT020P1
; CURRENT APPLICATION NUMBER: US/09/836,392
; CURRENT FILING DATE: 2001-04-18
; PRIOR APPLICATION NUMBER: 60/165,914
; PRIOR FILING DATE: 1999-11-17
; PRIOR APPLICATION NUMBER: 60/189,027
; PRIOR FILING DATE: 2000-03-14
; NUMBER OF SEQ ID NOS: 34
; SOFTWARE: PatentIn Ver. 2.0
; SEQ ID NO 2
; LENGTH: 2043
TYPE: DNA
; ORGANISM: Homo sapiens
US-09-836-392-2

First strand CDNA synthesis was primed with an oligo-dr primer containing a Not I site Double stranded CDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (GT)8 tail. The sequence tag for this
                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GACCACCACCACCTACCCAAAACATCTGCTGCACCAAAACCCATCTGTTCCTCCATACG 1950
